Instructional Module 6
Obstetrics Community Clinical Experience

Community Site: Dr. Noelle Zavala

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

During this day, I was able to observe routine check-ups of pregnant women. I was able to observe procedures such as listening to fetal heart rate using a doppler. I also got to look at the process of using a sonograph and seeing what a fetus may look. A specific procedure I was able to participate in doing a pap smear as well as doing a vaginal exam.

2. What was the best/most interesting part of the experience?

The most interesting part of the experience is getting to see a real cervix os and hearing the fetal heart rate. It was also a great learning experience, especially when Dr. Zavala provides patient education about their birth process, birth controls, and other expected outcomes or risks.

3. Is a community nursing position something that you would consider working in? Why or why not?

I think I would consider working as a community nurse. I notice community or clinic nurses are able to form a type of bond with the patients, being more knowledgeable about their diagnosis, and it seems to be a little less stressful than a floor nurse.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

I feel that this community site were able to meet the needs of the population they serve. They gave multiple options and offered appropriate resources to the patients. The patients also seemed satisfied of their services. Dr. Zavala made sure to ask if the patients had anymore concerns, needs, or questions which she answered thoroughly.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

I did witness patient teaching. Generally, Dr. Zavala taught about the causes and treatments of acid reflux, birth control options such as IUD and an extensive education about getting the patient's tubes tied and how it is irreversible. I felt that this was adequate teaching as she emphasized the main points of the topics: what is its purpose, the benefits and risks, and other options. Dr. Zavala made sure to answer any questions and was keen in making it to where it is ~~the~~ solely the patient's decision.
