Student Name Jovana Suarez Date: 10/23/24

Instructional Module 6: Obstetrics Community Clinical Experience

Community Site: Briget Winn OB Clinic

1. What did you observe during the day? Were there any specific procedures that were able to participate in or observe?

I was able to observe 6 papsmears and assist with a punch biopsy of the left labial fold tissue. I participated in giving education about medications such as Birth control/contraceptive — specifically the Nexplanon.

2. What was the best/most interesting part of the experience?

The most interesting part of this clinical site was helping assist with the punch biopsy. Mrs. Winn provided so much education and guidance and explained the procedure she was doing while I calmed the patient

3. Is a community nursing position something that you would consider working in? Why or why not?

yes I would consider working in because women's health is something that peaks my interest, as well as being an empathetic and emotional mentor for women that may feel alone or feel as if they have no other support.

4. Do you feel like this community site met the needs of the population they serve? Why or why not?

yes I feel that this community site met the needs of the population served by this community site because Mrs. Winn made her patients feel very comfortable, provided adequate education, and spent time answering and actively listening to patient questions.

5. Did you witness patient teaching? What general things were taught to this population? Do you feel that patient teaching in this community site was adequate? Why or why not?

I did witness patient teaching, especially the importance of smoking cessation when using contraceptive because risks of blood clotting — many women did NOT know of this major risk.

- preventitive measures → safe sex practices
- contraceptive side effects → HA, breast tenderness, blood clots, thrombus formation

6. Provide examples of care describing *one or more* of the IM6 Student Learning Outcomes.

IM6 Student Learning Outcomes				
Safety & Quality	**Clinical Judgment**	**Patient Centered Care**	**Professionalism**	**Communication & Collaboration**
Formulate a plan of care for the childbearing family, and the patient with mental health disorders using evidence-based practice, safety, and quality principles.	*Demonstrate clinical judgment using evidence-based data in making clinical decisions for the childbearing family, and the patient with mental health disorders.*	*Demonstrate family centered care based on the needs of the childbearing family, and the patient with mental health disorders.*	*Relate knowledge, skills, and attitudes required of the professional nurse by advocating and providing care to the childbearing families, and the patient with mental health disorders.*	*Communicate and collaborate effectively with patients, family, and members of the interdisciplinary team in the childbearing family, and the patient with mental health disorders.*

Safety & Quality:
Mrs. Winn formulated plans for her patients and wanted to follow up in approximately 6 weeks, and ensured their safety before and after each procedure. She made sure provide privacy as patients were undressing as well as explaining each step during her pap smear assessments.

Clinical Judgment:
Mrs. Winn demonstrated clinical judgement when choosing to biopsy white scaly lesions on a patient's labial fold to assess for any abnormal cell growth that could possibly be cancerous

Patient Centered Care:
Actively listened to patient's concerns about their health and reproductive cycle as well as recommended nonpharmacological methods (soaps) for female cleanliness without messing with the normal vaginal pH.

Professionalism:
Had a professional attitude and asked each patient if it was okay if I was helping and observing as a nursing student before providing care and doing any type of procedure.

Communication & Collaboration:
Collaborated with each patient and their schedule to make follow up appointments; was communicating with patients about their family, home life and other things to get the patient to open up and feel less scared during their procedure.
