

## **Conduct Preference Assessment (B-02)**

Example of how to conduct a **MULTIPLE STIMULUS Without Replacement Preference Assessment** with a child

1. Choose up to 10 possible reinforcers based on interviews and observations.
2. Create a list with the names of each item
3. Place items in linear array.
4. Say the Sd (discriminative stimulus - the stimulus that will initiate the skill through reinforcement), e.g. "Pick one"
5. Client picks one (therapist blocks attempt to grab more than one).
6. After client has had reinforcer for about 10 seconds, re-arrange array and repeat with remaining items
7. Document the sequence of chosen items (write 1 next to the 1<sup>st</sup> choice, and so on)
8. Repeat for 3 trials
