Soap Note pick Apart

09/10/2020

Patient coming today with complaints of strong urine odor and SBE education. She also said her leg is achey

Per providers orders: vitals taken (see tab) pt educated on CCMS and gave enough urine for UA, also preformed blood draw syringe for 4mL of whole blood using R AC, transferred into gold top tube.

patient did great job and physical exam found no problems with pateint

Doctor will see patient in room to talk about whats next

JC

My soap note pick apart

Patient presents today with complaints of strong odor in their urine. She reports symptoms for the last two weeks. She also reports that her right leg feels achy around the knee cap. She states she dies not remember doing anything to cause an injury to her knee. She has not falling or bumper it that she can remember. She states she woke up and it was achy. She reports that after being on it all day it swells and becomes sore to move or put pressure on the leg. She reports this symptom for the last month. She reports trying ice for 20 minutes on at a time for the last 2 weeks but does not feel it is helping. She would also like to be educated on SBE as she feels she needs to start preforming self-breast exams due to there being a family history of breast cancer.

Per provider orders: obtained patients vital signs see vital tab, Patient was educated on self-breast exams see education tab, patient was educated on how to obtain a clean catch mid-stream urine see education tab, Patient provided a clean catch mid-stream urine to run a UA. Venipuncture was preformed on the right AC to obtain 4ml of whole with the syringe method then transferred into a lavender top tube needed to run a CBC with diff. X-rays scheduled at Norther Light on right **medial patella.**

Patient tolerated the procedures without any complications. She reports a clear understanding of all the education provided to her today.

Patient is awaiting the provide in exam room 3 for UA results. Lab to forward results to provider, Provider will then call the patient with the results. Radiology to froward x-ray results to the provider and provider will notify patient with the results.
