Research Paper Proposal

Lesson Activity 3B

OVERVIEW

For this research paper I will be discussing the influence of screen time on children. I will focus on the benefits and the downfalls that screen times have on the development of children. I will include many frequently asked questions and concerns from parents and the solution to those questions.

GOALS

1. How can parents manage the screen timings of children?
2. What are the effects that screen time can have on a child's development?
3. Benefits of screen time.
4. Downfalls of screen time.
5. Why do some parents resort to screen time?
6. Benefits of timed screen time
7. How much is too much screen time?
8. At what age should kids be allowed?

SPECIFICATIONS

For this project I will be looking back on what we have learned in our lifespan development class in order to bring out how important childhood development is in my topic. I hope to learn more as I do my own research online from reputable sources as I will be using more than one source for this paper. During this research paper I hope to engage and educate my readers about the effects that screen time can have on young children. Whether they are positive or negative.
