

While loops: are loops used if you don't know how many times you are looping or if there is no clear loop variant. Curly braces are only necessary for multiple lines of code.

Is formatted

A **do while** loop is a loop that is performed under certain conditions or at least once. Error prone and difficult to read.

For loops are loops that can be performed only a certain number of times. Should be used when you know the number of loops are the obvious variable.
