

Kareema Selby

1) Name all six disease causation theories.

Supernatural Theory, Humoral Theory, Miasmatic Theory, Contagion Theory, Germ Theory, Multifactorial theory,

2) Provide a brief description of each theory in order to distinguish them from one another.

Supernatural theory- Pertains to witchcraft to tame the devils, also deals with evil forces, and demons

Germ Theory- Specific Pathogen causes specific diseases

Humoral Theory- Body is composed of four fluids, fluids must remain balanced in order for a person to stay healthy.

Miasmatic Theory- The product of environmental factors such as contaminated water, foul air, and poor hygienic conditions.

Contagion Theory- Disease could spread by touch, whether of infected cloth, food or people.

Multifactorial Theory- This theory helps to understand the various associated causative factors

3) Document the development timeline of the theories from the earliest to the most current. Supernatural theory, miasmatic Theory, humoral theory, multifactorial theory, contagion theory ,germ theory
