

1. In the research process, what phase is synthesizing? Explain how it is used.

This is the phase where you prove if the information that you are presenting is right. You try and make sense of the data. This is the last phase.

2. In the research process, what phase is brainstorming? Explain how it is used.

This is the phase where you begin to come up with ideas. You are trying to find the right topic. This phase is important because it allows you to explore and not just settle on the first topic. You can check your notes. Use the internet. Discuss with your teacher and your classmates.

3. In the research process, what phase is free writing? Explain how it is used.

Freewriting is the phase brainstorming. This is the process where you write non-stop for ten minutes. You can use a key concept related to the assignment as a starting point. You can write whatever comes to mind, and not worry about typos or other mistakes, just write.

4. Discuss the difference between Academic Research and Practical Research?

Academic research investigation and writing based on the idea of scientific inquiry.

Practical research is something that we all do each day.
