

Success for Life in Ministry

Writing Assignment 9/19/18 Linda Scott

- 1) When I visit the library, I encounter a new discovery. The Library is filled with all kinds of books and educational tools to broaden the mind. It was once said that if you wanted to keep a secret from a black person, put it in a book. I tell that to everyone of color I know to challenge them to read and understand. I read as often as I can. Reading has become easier with online books and gadgets and I'm always searching for a new discovery.
- 2) User friendliness of the Library is very important for people to navigate through materials more efficiently. The environment produces more productivity if quiet and people are able to access books and material with ease. I use the computer catalog to find books and materials and this contributes to a user-friendly library.
- 3) Having accessibility to materials saves time and helps people be more productive. Technology enhances accessibility in libraries today through online libraries and digital materials available at a click of the mouse. Having access to materials, helps patrons be more self-efficient and productive.
- 4) The service of staff is very necessary in this technological world today. When computers go on the blink or you need help finding materials it is good to know the library staff is available to assist you.
- 5) The most important thing that I've learned is it takes a variety of components to ensure a productive library environment. Knowing how to use technological components in a library and having access to the library staff is very important. A quiet and productive environment enhances the quality of study and retrieving needed materials.
