THE POWER OF THINKING

Human beings were created by God with the conscious mind of being able to choose good from bad. They have the ability to make a decision on their actions. Since God gave man free will to decide, there are consequences on the choices we make. If the decisions we make are positive, the person will be happy and will be compassionate to other human beings. If the choices are negative they become toxic and the result would be negative social behavior and may result in sickness.

The human being has the ability to make a positive change by having positive thinking. When there is positive attitude change then a person is able to love and be patient towards other people.

For change to take place man has to trust God to help. Mark 11:22 says 'Have faith in God'. A man has the capacity to change his attitude. He has the ability to think and change bad choices to positive choices.
