

BRIEF INTRODUCTION OF MY FINAL REASERCH PAPER.

The verse from the bible is actually the parable of **mustard seed**. In the book of Matthew 13:31-32, is where you find this parable, it says: "The kingdom of heaven is like a grain of mustard seed that a man took and sowed in the field. It is the smallest of all seeds, but when it has grown it is larger than all the garden plants and becomes a tree, so that the birds of the air come and make nests in its branches". {ESV Study bible}. The interpretation behind this is, Jesus was referring about His kingdom of heaven, that was insignificant to Israel who were not prepared for it because of their disbelief, He wined their attention by using this parable that was easier to comprehend, How the small kingdom of heaven will become a greater kingdom over all kingdom heaven and earth.

On the other hand of science perspective is that, according to law of genetic we learnt we can be applicable to this verse. Mustard seed is a tiny seed in Palestine that grow to a height of 8 to 12 feet and 2.4 to 3.7m. This supports law of genetic, that explain how genes {DNA} are transferred from parent to the offspring. So in this case during germination the seed exchanged its genetic code, this is because genes are like information inside the seed that tells the seed how big it's going to grow as well wide and how to look like, same happens to human being. So this mustard seed followed that code from tiny seed to huge tree. More will be explained on this research.
