

Covid-19 Close College

In this argumentative essay I will be discussing why closing colleges due to Covid-19, and what CDC said about Universities are closing down around the world and going to virtual classes online. You will also understand the symptoms, and ways to prevent yourself from contracting this virus.

Coronavirus that is called Covid-19 pandemic started affecting people in the city of Wuhan China in mid December 2019. What is Coronavirus? Is a viral disease characterized by a predominant infection of the respiratory system and gastro traits. This virus has caused diseases ranging from common cold, upper respiratory infections, and severe acute respiratory. No matter where you live this virus has affected everyone's life.

There are some prevention's that can be taken. First make sure you stay 6 feet away from social distance, wash your hands, wear a mask, disinfect what you touch, do not hold gatherings with more than 10 or more people. If you have been exposed you are too isolated and quarantine yourself for 14 days. The death toll in the US has increased drastically. Statistics have shown the cases as 12,425,244 worldwide cases with 561,928 deaths and 7,318,874 recovered. Symptoms can appear two to 14 days after exposure the symptoms such as: fever, chills, cough, shortness of breath, fatigue, muscle aches, headaches, sore throat, nausea and vomiting, congestion, runny nose, and diarrhea. If you have a cold as many may say allergies how do you know if it's a symptom for covid-19. I say go get checked anyways no matter if you think it's just a little cold.

My question is how is this pandemic affecting schools? People learn best at school because it has the right tools with the fundamentals, social skills and growth. This pandemic has impacted with unexpected transition with distance of learning. One huge area that COVID-19 is impacting and sowing major confusion is in higher education. This impact has also affected applications, admissions, tuition, student loans, and teaching, COVID-19 is making a substantial,

and perhaps, lasting impression on colleges and universities. It's also makes it hard for developers to move all of their programming online, including counseling, student life, career development without being in a classroom setting. As Universities closes many students in a resource on limited or stress that's not conducive to learning. Students who have low socioeconomic status may not have housing options. Housing could become difficult for ethics backgrounds, domestic home, challenges with childcare. Students for whom finances were not a particular concern are now focusing on their state institutions to save money. It is too early to predict implications for student loan debt. However, losses in endowments and operating funds may prompt college and universities to reduce or increase to put students in more student loans debt. Some people can not learn through Virtual services or online that's why they go on campus. Some students are upset about it because they pay a lot of money to the school and not get taught well in their degree field. Most people learn from hands on or having the skill settings in a classroom. There are some student who can't afford to buy computers, desktop, printer to continue their education when they have all access at school. Not everyone can go to a nearby library to get the references needed.

In conclusion this pandemic has put students on a high stress level and could decrease the success rate of students graduating. Covid-19 has also affected funding which could cause students to drop out because of financial situations. I don't know what plan that will come into play for the next school year. Hopefully universities can pick up where they left off. The way I feel about it is that if the students want to come to campus and do what CDC is requiring then they should be allowed to do so. College is expensive and everyone needs to get the right learning experience for their money. If local colleges can open with safety measures in place and space between students in classrooms, for instance they might be seen as a good option for a year while the situation with the virus becomes more definite.
