

**Unit V: Spinal Cord Injuries**  
*Nursing 202: Advanced Concepts of Nursing*  
*Ticket to Enter*

|                       |       |                                                                                                                                                        |
|-----------------------|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| Paraplegia            | _____ | <b>A.</b> swelling of cord secondary to trauma. Can make incomplete lesion complete                                                                    |
| Quadriplegia          | _____ | <b>B.</b> paralysis of all four extremities and usually the trunk. C1 to T1                                                                            |
| Cord Transection      | _____ | <b>C.</b> neuron whose body cell lies in motor area of the cerebral cortex. The axon passes down the spinal cord and synapses with lower motor neurons |
| Brown Sequard         | _____ | <b>D.</b> All motor and sensory tracts below level of lesion are affected                                                                              |
| Cord Edema            | _____ | <b>E.</b> paralysis of lower portion of the body and both legs. Injury T2; lumbar-arms are spared                                                      |
| Spinal Shock          | _____ | <b>F.</b> neuron whose cell lies in the anterior gray column of spinal cord. Its axon innervates striated muscle fibers.                               |
| Upper Motor Neuron    | _____ | <b>G.</b> Ipsilateral paralysis, contralateral loss of pain and temperature                                                                            |
|                       |       | <b>H.</b> flaccid paralysis                                                                                                                            |
| Lower Motor Neuron    | _____ | <b>I.</b> vasoconstrictive response to stimulation (often in response to bladder distention)                                                           |
| Autonomic Dysreflexia | _____ | <b>J.</b> fight or flight                                                                                                                              |
|                       |       | <b>K.</b> rest and digest                                                                                                                              |
| Parasympathetic       | _____ |                                                                                                                                                        |
| Sympathetic           | _____ |                                                                                                                                                        |
