

## **Unit I: Ticket to Enter**

### *Nursing 202: Advanced Concepts of Nursing*

**After reviewing the 2022 National Patient Safety Goals (NPSG) for Hospitals, respond to the following questions.**

1. Review the *Transfusion of Blood and Blood Components* Policy at Beebe Healthcare. This semester, we will frequently be administering blood to our patients. It is vital to be aware of the proper measures to identify patients correctly when administering blood (NPSG 01.03.01). According to the policy, how would a *patient and product identification check* be performed?
  
2. According to NPSG 06.01.01, *Using Alarms Safely*, what types of equipment is it imperative that alarms are functioning, heard, and responded to on time?
  
3. When caring for the high risk psychiatric patient, what safety precautions would you take to ensure their safety, according to NPSG 15.01.01?
  
4. What are Joint Commission and Beebe encouraging staff to document when teaching about your patient's medications?
  
5. You are preparing to administer Packed Red Blood Cells (PRBC) to a GI bleed. What rate would you begin the infusion? After 15 minutes and no signs or symptoms of reaction, what would you change to the rate to? (see policy)
