Step 2: Box opens and you must select site. Should have checked last site on EMR prior to entering room, but now is a good time to verify with patient at bedside.

The screenshot displays an EMR interface with a charting window for heparin administration. The patient is ZZTEST, KELLYLYNNE, Female, 48 years old, with a weight of 86.000 kg. The charting window shows the medication details and a schedule table. The site selection dropdown menu is open, listing various anatomical sites.

** Allergies **

Step 3: Click on comment tab at bottom and document platelet count. No longer need to cross-check Heparin with another nurse (but not a bad idea to have a peer check your dose). Click ok to close that box and ok to close the box behind that one.

The screenshot displays a medical charting interface for patient ZZTEST, KELLYLYNNE. The patient's information includes age (48 years), legal sex/birth sex (Female/Male), and weight (86.000 kg). The attending physician is Galdi DO. The charting window is titled "Charting for: ZZTEST, KELLYLYNNE" and shows a medication administration record for heparin, 5,000 unit(s), Subcutaneous, Form: Soln, First Dose: 28-Feb-2019 21:00:00 EST. The performed date/time is 02/28/2019 1531 EST, performed by Maet RN, Morgan. A comment box is open, titled "Comment - ZZTEST, KELLYLYNNE - 990093583", containing the text: "heparin: 5,000 unit(s)", "Comment", "platelet count 250", and "2nd RN check C. Buoni, RN". The interface also shows a list of scheduled medications for Feb-28-2019, with the 16:00 EST PRN dose selected. The bottom of the screen shows a date of 27-Sep-2018 10:49:00 EDT.

Step 4: Now that you have a blue checkmark, you may proceed with your injection. Click sign after medication administered.
