

## **Vital Statistics and Cultural Implications**

### ***Nursing 201: Nursing Care of Special Populations***

Come prepared to class with current statistics to share with your group members on the specific topic. You then will discuss the trends of the statistics and any rationale for the trend.

In addition, be prepared to research cultural birthing implications (issues, considerations, taboos, preferences, laboring/ postpartum concerns, etc.) within your group and then concisely present to the class.

You will have thirty minutes to work within your groups and five minutes for each group to present.
