

2/28 class prep:

- What happens if you have low ventilation and perfusion? Is one worse than the other?
- Is the type 2 respiratory failure (hyper panic) more severe/urgent?
- How do you know a patient is ready for PSV (to be weaned)?
- What happens if the respiratory therapist is not coming to adjust the ventilator and the patient is in distress? Would this be the time to ambu bag them?
- Are we tested on this content?
- What is the difference between hypoxia and hypoxemia?
- Do you have any tricks for remembering ABGs?
