

## Independent Assignment

### Abnormal/Interrupted Fetal Development

1. What are the clinical manifestations for an ectopic pregnancy?

**Normal at first: n/v, breast tenderness, missed period, abd pain, spotting**

**After rupture: acute/severe pain, unstable VS, referred shoulder pain, shock s+s, internal bleeding, dizziness/faintness, cullen's sign**

2. What is a hydatidiform mole (molar pregnancy)

**A tumor that develops in the uterus through rapidly growing trophoblastic cells and associated with a nonviable pregnancy**

3. What are the manifestation of a molar pregnancy and are there are any complications you should know for follow up care?

**Vaginal bleeding, n/v, enlarged uterus, preeclampsia, no FHT's**

**A complication of this could be choriocarcinoma which we should look for irregular vaginal bleeding and pain. We can anticipate starting chemo with methotrexate if no mets**
