

Student Name: Jada Custis
Clinical Instructor: Helsel

- a. If **yes**, write it here: I put impaired gas exchange
- b. If **no**, write what you now understand the priority nursing problem to be:

- 3) Review your Nursing Process Form: Did you see many of your anticipated nursing assessments and interventions used?
- a. Indicate (circle, star, highlight) the ones you saw utilized during the scenario.
- b. Were there interventions you included that *were not* used in the scenario that could help this patient?
- i. If **yes**, describe:
Yes I saw deep breathing and coughing exercises and splinting. I also saw oxygen therapy and the auscultation of the lungs.
- ii. If **no**, describe:

- 4) Often patient care will take a different direction than we anticipated at the beginning of our shift. Did that happen here? Yes
- a. How did that impact the nursing care delivered?
This impacted nursing care because different things had to be tried so that the pt could get relieve like when they couldn't turn up the oxygen anymore they turned to other relief techniques like splinting and deep breathing so that the pt could breathe better
- b. What new, additional priority nursing problem (diagnosis) did you identify? (Refer to your NANDA list)
- i. Write it here: Ineffective coping

What was your biggest “take-away” from participating in the care of this patient? How did this impact your nursing practice:

My biggest take away from this s always listen to the families concerns because they know the pt better than you and they know what their normal life looks like outside of the hospital and it could lead to a diagnosis or a solution. this impacted my nursing practice because it makes me see a pt's family in a whole new light especially when they ask questions.
