**Unit 1 Part 1 – Day 2 Class Preparation Assignment**

Review Beebe Healthcare's Transfusion of Blood and Blood Components in order to respond to the following questions. Submit to Mrs. Helsel's Dropbox by **0830 on Wednesday 2/7/24**.

1. List least two topics that a care provider is responsible for understanding in regard to a blood transfusion procedure. **Ordering/requesting of the blood/blood products, transfusion process, and collection of the pre-transfusion blood sample**
2. Consent is required **\_prior to\_** placing a request for a blood product, except for in emergent circumstances.
3. In emergent and life-threatening situations, **\_uncrossmatched\_** blood requested by a provider will be provided by the blood bank within 7 minutes of the verbal request.
4. According to Beebe's policy, the patient should have a peripheral IV **\_22\_** gauge or larger for routine blood administration.
5. True or False. Blood products can be sent through the pneumatic tube station. **True**
6. What specific tubing is needed when administering blood products? **Y tube blood solution pump set with 170 to 260 micron filter**
7. The most fatal transfusion events occur because oversights are made during the **\_pre-transfusion positive identification verification checks\_**.
8. True or False. If the patient is wearing a hospital ID band, is alert and oriented, and can verbalize their information, a two-nurse check is not required. **False**
9. The blood transfusion should be set at 50 mL/hr for the first **\_15 minutes\_**.
