

Heart Failure Review

Instructions: Complete the diagram by labeling each symptom appropriately to either right or left sided heart failure

Fatigue	Orthopnea	GI Distress/Anorexia	Confusion
Cyanosis	Distended Jugular Veins	Ascites	Weight gain
Enlarged liver & spleen	Tachypnea	Paroxysmal Nocturnal Dyspnea	Crackles/Wheezes
Restlessness	Dependent edema	↑ peripheral venous pressure	Exertional dyspnea
↑ pulm cap wedge pressure	Cough	Blood tinged sputum	May be caused by chronic pulm problems

Right Sided HF:

Fatigue

Increased peripheral pulses

Ascites

Enlarged liver and spleen

JVD

Complaints of GI distress

Weight gain

Dependent edema

Left Sided HF:

Nocturnal Dyspnea

Pulmonary congestion

Fatigue

Cyanosis

Tachycardia

Confusion

Tachypnea

Orthopnea

Blood tinged sputum

Wheezes/Crackles

Label the coronary arteries on the diagram below. For the bolded arteries, state what portion of the heart they feed.

- **Left Anterior Descending (LAD)**
- **Right Coronary Artery**
- Left Coronary Artery
- **Left Circumflex**
- Aorta
