

Sydney Auen

Class Prep 2/27

Types of respiratory failure

1. Does either type 1 or type 2 have a better prognosis or is the type only used to describe the cause?

Ventilation setting part 1

1. How do the settings get adjusted (FiO₂, PEEP, ect.) for each patient and do they stay the same or will they change throughout their stay at the hospital?

Ventilation setting part 2

1. How do we know if the patient is ready to be extubated?

ABG Basics

1. Can we go over uncompensated, partially compensated, and completely compensated in class?
