

Cardiac Assessment Definition Match

A Thrill

~~F~~. Turbulent sounds occurring between normal heart sounds. Characterized by loudness, pitch, shape, duration. Graded I-VI

K 3rd Heart Sound

~~D~~. Small red streaks under fingernails

I Troponins

~~G~~. HR > 100

N HDL

~~E~~. HR < 60

F Heart murmurs

~~B~~. The amount of blood pumped by each ventricle in 1 min. Calculated by Stroke Volume X HR

D Splinter hemorrhages

~~M~~. Peripheral resistance against which the left ventricle must pump

G Tachycardia

~~A~~. Turbulent flow through artery caused by aneurysm or arterial obstruction

E Bradycardia

~~X~~. Contractile proteins released after MI. Both T and I samples test for cardiac injury/ischemia

H Arterial bruit

~~K~~. Extra heart sound heard in EARLY diastole, similar to the sound of a gallop. Causes include Left Ventricular failure, volume overload, aortic or tricuspid regurgitation

J LDL

~~L~~. Alteration of spine often in elderly resulting in altered chest landmarks, auscultation, and percussion

B Cardiac Output

~~C~~. The volume of blood stretching the ventricles at the end of diastole before the next contraction

L Kyphosis

~~H~~. Vibration of vessel or chest

C Preload

~~N~~. Lipoprotein considered to be the "good cholesterol"

M Afterload

~~J~~. Lipoprotein considered to be the "lethal cholesterol"
