

Cardiac Assessment Definition Match

A Thrill

~~F.~~ Turbulent sounds occurring between normal heart sounds. Characterized by loudness, pitch, shape, duration. Graded I-VI

H 3rd Heart Sound

~~D.~~ Small red streaks under fingernails

I Troponins

~~G.~~ HR > 100

N HDL

~~E.~~ HR < 60

F Heart murmurs

~~B.~~ The amount of blood pumped by each ventricle in 1 min. Calculated by Stroke Volume X HR

D Splinter hemorrhages

~~M.~~ Peripheral resistance against which the left ventricle must pump

G Tachycardia

~~A.~~ Turbulent flow through artery caused by aneurysm or arterial obstruction

H Bradycardia

~~J.~~ Contractile proteins released after MI. Both T and I samples test for cardiac injury/ischemia

K Arterial bruit

~~K.~~ Extra heart sound heard in EARLY diastole, similar to the sound of a gallop. Causes include Left Ventricular failure, volume overload, aortic or tricuspid regurgitation

J LDL

~~L.~~ Alteration of spine often in elderly resulting in altered chest landmarks, auscultation, and percussion

B Cardiac Output

~~C.~~ The volume of blood stretching the ventricles at the end of diastole before the next contraction

L Kyphosis

~~H.~~ Vibration of vessel or chest

C Preload

~~N.~~ Lipoprotein considered to be the "good cholesterol"

M Afterload

~~J.~~ Lipoprotein considered to be the "lethal cholesterol"
