

## Cardiac Assessment Definition Match

Heather Schurman

H - Thrill

F. Turbulent sounds occurring between normal heart sounds. Characterized by loudness, pitch, shape, duration. Graded I-VI

K - 3<sup>rd</sup> Heart Sound

D. Small red streaks under fingernails

I - Troponins

G. HR > 100

N- HDL

E. HR < 60

F - Heart murmurs

B. The amount of blood pumped by each ventricle in 1 min. Calculated by Stroke Volume X HR

D - Splinter hemorrhages

M. Peripheral resistance against which the left ventricle must pump

G - Tachycardia

A. Turbulent flow through artery caused by aneurysm or arterial obstruction

E - Bradycardia

I. Contractile proteins released after MI. Both T and I samples test for cardiac injury/ischemia

A - Arterial bruit

K. Extra heart sound heard in EARLY diastole, similar to the sound of a gallop. Causes include Left Ventricular failure, volume overload, aortic or tricuspid regurgitation

J - LDL

L. Alteration of spine often in elderly resulting in altered chest landmarks, auscultation, and percussion

B - Cardiac Output

C. The volume of blood stretching the ventricles at the end of diastole before the next contraction

L - Kyphosis

H. Vibration of vessel or chest

C - Preload

N. Lipoprotein considered to be the "good cholesterol"

M - Afterload

J. Lipoprotein considered to be the "lethal cholesterol"
