Day 2 Class Prep Assignment

1. What is a CAUTI?

CAUTI stands for "Catheter-associated urinary tract infection"

2. What are ways to prevent a CAUTI? **Select all that apply: A, C, D**

A. Hand Hygiene

B. Prolonged use of indwelling catheters

C. Routine catheter care

D. Early removal of indwelling catheter

E. Good nutrition

3. What is the most effective way to prevent healthcare-associated infections (HAIs)?

The most effective way to prevent HAI's is by handwashing. This decreases the risk of infection, and it is something the nurses or any healthcare worker should be performing. Hand hygiene can be done by an alcohol-based hand sanitizer or by washing hands thoroughly with soap and water.

4. In which circumstances should a healthcare worker utilize soap and water for hand hygiene instead of waterless hand rub? **Select all that apply: A & C**

A. When hands are visibly soiled

B. When entering a client room

C. After caring for a client who has infectious diarrhea

D. Before checking a client's vital signs

E. Before performing a dressing change

5. What do you do with the orange sticker post foley catheter care?

You remove the orange sticker from, the front of the empty pack of wipes that was set aside on the foley compliance calendar and include the BD drainage bag.

6. What are the 4 types of exudates used to describe wounds?

Serous: "Thin, watery wound damage"

Serosanguineous: "Thin, watery wound drainage mixed with blood"

Sanguineous: "Bloody wound drainage"

Purulent: "Green/yellow wound drainage"

7. Identify 1 bony prominence susceptible to pressure injury formation:

Heels, toes, sacrum

8. What is the name of the equipment used to empty a foley catheter bag?

The name of the equipment used to empty a Foley catheter bag is straight or intermittent catheters.

Day 2 Class Prep Assignment

9. What type of bedpan do you utilize for a client with a hip fracture? C

- A. Ridged bedpan
- B. Orthopedic bedpan
- C. Fractured bed pan**
- D. Bariatric bedpan

10. What is an imperative assessment you perform when you are positioning the client in a side-lying position? When positioning the client in a side position you should always prioritize the client's safety such as having comfortability such as closing the curtains for privacy. After that, you would help the client to turn on the side and put pillows down in order to help the client to stay in that position. Meanwhile the nurse will also be checking the client's skin for anything. After a pillow is to be put between the client's legs and one under the two legs. At the end you always have to make sure that the clients feel comfortable in that position.
