Day 2 Class Prep Assignment

1. What is a CAUTI?

A CAUTI is a catheter-associated urinary tract infection. CAUTI commonly relates to patient morbidity and the events of healthcare-acquired infections. Thus, prevention is key for the safety of the patient.

2. What are ways to prevent a CAUTI? **Select all that apply:**

- A. Hand Hygiene**
- B. Prolonged use of indwelling catheters
- C. Routine catheter care**
- D. Early removal of indwelling catheter**
- E. Good nutrition

3. What is the most effective way to prevent healthcare-associated infections (HAIs)?

The most effective way to prevent HAIs is proper hand hygiene.

4. In which circumstances should a healthcare worker utilize soap and water for hand hygiene instead of waterless hand rub? **Select all that apply:**

- A. When hands are visibly soiled**
- B. When entering a client room
- C. After caring for a client who has infectious diarrhea**
- D. Before checking a client's vital signs
- E. Before performing a dressing change

5. What do you do with the orange sticker post foley catheter care?

You place it in the appropriate spot on the catheter bag to document that foley catheter care has been completed.

6. What are the 4 types of exudates used to describe wounds?

The types of exudates used to describe wounds are serous, serosanguineous, sanguineous, or purulent. Serous refers to a thin, watery wound drainage. Serosanguineous refers to thin, watery wound drainage mixed with blood. Sanguineous is simply a bloody wound drainage. Finally, purulent refers to a green or yellow presence.

7. Identify 1 bony prominence susceptible to pressure injury formation:

The heels are a bony prominence susceptible to pressure injury formation.

8. What is the name of the equipment used to empty a foley catheter bag?

The name of the equipment is a graduated cylinder used to measure urine output.
