**Unit 1 Part 1 – Day 2 Class Preparation Assignment**

Review Beebe Healthcare's Transfusion of Blood and Blood Components in order to respond to the following questions. Submit to Mrs. Helsel's Dropbox by **0830 on Wednesday 2/5/25**.

1. List least two topics that a care provider is responsible for understanding in regard to a blood transfusion procedure. **The care provider must understand the explanation of a transfusion, the options of alternatives to the transfusion, and the outcome of the transfusion.**
2. Consent is required **prior to** placing a request for a blood product, except for in emergent circumstances.
3. In emergent and life-threatening situations, **uncrossmatched red blood cells / 0+ low titer Whole** blood requested by a provider will be provided by the blood bank within 7 minutes of the verbal request.
4. According to Beebe's policy, the patient should have a peripheral IV **\_22\_** gauge or larger for routine blood administration.
5. **True** or False. Blood products can be sent through the pneumatic tube station.
6. What specific tubing is needed when administering blood products? **Y tubing must be used with an infusion pump or rapid infuser.**
7. The most fatal transfusion events occur because oversights are made during the **pre-transfusion positive identification verification checks.**
8. True or **False**. If the patient is wearing a hospital ID band, is alert and oriented, and can verbalize their information, a two-nurse check is not required.
9. The blood transfusion should be set at 50 mL/hr for the first **15 minutes.**
