

Cardiac Assessment Definition Match

H. Thrill

F. Turbulent sounds occurring between normal heart sounds. Characterized by loudness, pitch, shape, duration. Graded I-VI

K. 3rd Heart Sound

D. Small red streaks under fingernails

I. Troponins

G. HR > 100

N. HDL

E. HR < 60

E. Heart murmurs

B. The amount of blood pumped by each ventricle in 1 min. Calculated by Stroke Volume X HR

D. Splinter hemorrhages

M. Peripheral resistance against which the left ventricle must pump

G. Tachycardia

A. Turbulent flow through artery caused by aneurysm or arterial obstruction

E. Bradycardia

I. Contractile proteins released after MI. Both T and I samples test for cardiac injury/ischemia

A. Arterial bruit

K. Extra heart sound heard in EARLY diastole, similar to the sound of a gallop. Causes include Left Ventricular failure, volume overload, aortic or tricuspid regurgitation

J. LDL

L. Alteration of spine often in elderly resulting in altered chest landmarks, auscultation, and percussion

B. Cardiac Output

C. The volume of blood stretching the ventricles at the end of diastole before the next contraction

L. Kyphosis

H. Vibration of vessel or chest

C. Preload

N. Lipoprotein considered to be the “good cholesterol”

M. Afterload

J. Lipoprotein considered to be the “lethal cholesterol”
