Heart Failure Review

Instructions: Complete the diagram by labeling each symptom appropriately to either right or left sided heart failure

Fatigue	Orthopnea	GI Distress/Anorexia	Confusion
Cyanosis	Distended Jugular Veins	Ascites	Weight gain
Enlarged liver & spleen	Tachypnea	Paroxysmal Nocturnal Dyspnea	Crackles/Wheezes
Restlessness	Dependent edema	↓ peripheral venous pressure	Exertional dyspnea
↑ pulm cap wedge pressure	Cough	Blood tinged sputum	May be caused by chronic pulm problems

LEFT SIDED ♥ FAILURE

RIGHT SIDED ♥ FAILURE

(Cor Pulmonale)

Label the coronary arteries on the diagram below. For the bolded arteries, state what portion of the heart they feed.

- **Left Anterior Descending (LAD)** → Supplies blood to the front of the left side of the heart
- **Right Coronary Artery** → Supplies blood to RV, RA, and the SV + AV nodes
- **Left Coronary Artery**
- **Left Circumflex** → Supplies blood to the left atrium (LA) + posterior of the left ventricles
- **Aorta**
