

Cardiac Assessment Definition Match

H Thrill ~~F.~~ Turbulent sounds occurring between normal heart sounds. Characterized by loudness, pitch, shape, duration. Graded I-VI

K 3rd Heart Sound ~~D.~~ Small red streaks under fingernails

I Troponins ~~G.~~ HR > 100

N HDL ~~E.~~ HR < 60

F Heart murmurs ~~B.~~ The amount of blood pumped by each ventricle in 1 min. Calculated by Stroke Volume X HR

D Splinter hemorrhages ~~M.~~ Peripheral resistance against which the left ventricle must pump

G Tachycardia ~~A.~~ Turbulent flow through artery caused by aneurysm or arterial obstruction

E Bradycardia ~~I.~~ Contractile proteins released after MI. Both T and I samples test for cardiac injury/ischemia

A Arterial bruit ~~K.~~ Extra heart sound heard in EARLY diastole, similar to the sound of a gallop. Causes include Left Ventricular failure, volume overload, aortic or tricuspid regurgitation

J LDL ~~L.~~ Alteration of spine often in elderly
