

Cardiac Assessment Definition Match

___H___ Thrill

F. Turbulent sounds occurring between normal heart sounds. Characterized by loudness, pitch, shape, duration. Graded I-VI

___K___ 3rd Heart Sound

D. Small red streaks under fingernails

___I___ Troponins

G. HR > 100

___N___ HDL

E. HR < 60

___F___ Heart murmurs

B. The amount of blood pumped by each ventricle in 1 min. Calculated by Stroke Volume X HR

___D___ Splinter hemorrhages

M. Peripheral resistance against which the left ventricle must pump

___G___ Tachycardia

A. Turbulent flow through artery caused by aneurysm or arterial obstruction

___E___ Bradycardia

I. Contractile proteins released after MI. Both T and I samples test for cardiac injury/ischemia

___A___ Arterial bruit

K. Extra heart sound heard in EARLY diastole, similar to the sound of a gallop. Causes include Left Ventricular failure, volume overload, aortic or tricuspid regurgitation

___J___ LDL

L. Alteration of spine often in elderly resulting in altered chest landmarks, auscultation, and percussion

___B___ Cardiac Output

C. The volume of blood stretching the ventricles at the end of diastole before the next contraction

___L___ Kyphosis

H. Vibration of vessel or chest

___C___ Preload

N. Lipoprotein considered to be the "good cholesterol"

___M___ Afterload

J. Lipoprotein considered to be the "lethal cholesterol"
