

Cardiac Assessment Definition Match

___H___ Thrill

~~F. Turbulent sounds occurring between normal heart sounds. Characterized by loudness, pitch, shape, duration. Graded I-VI~~

___K___ 3rd Heart Sound

~~D. Small red streaks under fingernails~~

___I___ Troponins

~~G. HR > 100~~

___N___ HDL

~~E. HR < 60~~

___F___ Heart murmurs

~~B. The amount of blood pumped by each ventricle in 1 min. Calculated by Stroke Volume X HR~~

___D___ Splinter hemorrhages

~~M. Peripheral resistance against which the left ventricle must pump~~

___G___ Tachycardia

~~A. Turbulent flow through artery caused by aneurysm or arterial obstruction~~

___E___ Bradycardia

~~I. Contractile proteins released after MI. Both T and I samples test for cardiac injury/ischemia~~

___A___ Arterial bruit

~~K. Extra heart sound heard in EARLY diastole, similar to the sound of a gallop. Causes include Left Ventricular failure, volume overload, aortic or tricuspid regurgitation~~

___J___ LDL

~~L. Alteration of spine often in elderly resulting in altered chest landmarks, auscultation, and percussion~~

___B___ Cardiac Output

~~C. The volume of blood stretching the ventricles at the end of diastole before the next contraction~~

___L___ Kyphosis

~~H. Vibration of vessel or chest~~

___C___ Preload

~~N. Lipoprotein considered to be the "good cholesterol"~~

___M___ Afterload

~~J. Lipoprotein considered to be the "lethal cholesterol"~~
