

Module Report

Tutorial: Real Life RN Medical Surgical 4.0

Module: Total Hip Arthroplasty

Individual Name: Chase Norton

Institution: Margaret H Rollins SON at Beebe Medical Center

Program Type: Diploma

Standard Use Time and Score

	Date/Time (ET)	Time Use	Score
Total Hip Arthroplasty	10/8/2025 2:03:44 PM	28 min	Needs Improvement
This attempt ended prematurely due to a detrimental decision or a series of missteps.			

Reasoning Scenario Details

Total Hip Arthroplasty - Use on 10/8/2025 1:40:32 PM ET

Reasoning Scenario Performance Related to Outcomes:

*See Score Explanation and Interpretation below for additional details.

Body Function	Strong	Satisfactory	Needs Improvement
Cardiac Output and Tissue Perfusion	100%		
Cognition and Sensation			100%
Excretion		100%	
Immunity	100%		
Mobility	50%		50%
Regulation and Metabolism	20%	60%	20%

NCLEX RN	Strong	Satisfactory	Needs Improvement
RN Management of Care	100%		
RN Safety and Infection Control			100%
RN Basic Care and Comfort	100%		
RN Pharmacological and Parenteral Therapies	50%	25%	25%

RN Reduction of Risk Potential	42.9%	42.9%	14.3%
--------------------------------	-------	-------	-------

QSEN	Strong	Satisfactory	Needs Improvement
Safety	40%	20%	40%
Patient-Centered Care	50%	50%	
Evidence Based Practice	60%	20%	20%

Thinking Skills	Strong	Satisfactory	Needs Improvement
Clinical Application	80%	20%	
Clinical Judgment	33.3%	33.3%	33.3%

Decision Log:

Scenario	The preoperative consult nurse is identifying the risk factors associated with postoperative complications.
Question	Nurse Amani is reviewing Dale's medical record. Which of the following findings should Amani identify as a risk factor for postoperative complications?
Selected Ordering	Renal functionBMIHemoglobinTobacco useAgeBlood pressure history
Rationale	Nurse Amani should identify that Dale's blood pressure and history of hypertension pose a risk factor postoperatively. Clients who have hypertension are more likely to experience and respiratory and cardiac complications following surgery.

Optimal Decision	
Scenario	Dale is returning demonstration of each of the postoperative exercises.
Question	Nurse Amani is observing Dale return demonstration of the postoperative exercises. Which of the following demonstrations by Dale indicate the teaching has been effective?
Selected Option	Client correctly performed the ankle pumps exercise
Rationale	Dale correctly performed the ankle pumps exercise which involves moving the ankle so that the foot alternately dorsiflexes and plantar flexes. This exercise should be performed at least 10 times every hour while awake. It promotes blood flow to the lower leg by contracting and relaxing the muscles in the calf.

Optimal Decision	
Scenario	Amani is reviewing Dale's home medications and instructing them which home medication to take on the day of surgery.

Question	Nurse Amani is reviewing Dale's electronic medication record (EMR). Based on the provider's prescriptions, Amani should instruct Dale to take which of the following medications on the morning of surgery?
Selected Option	Amlodipine
Rationale	Nurse Amani should recognize that the provider's prescription indicates the medication to manage hypertension should be taken the morning of surgery. Amlodipine is a calcium channel blocker which is used to manage hypertension. Therefore, Nurse Amani should instruct Dale to take this medication the day of surgery.

Scenario	The preoperative holding nurse evaluates the data and determines next steps.
Question	Nurse Bobby Lee has obtained and reviewed Dale's vital signs. Based on these findings, which of the following actions should Bobby Lee take?
Selected Option	Obtain a prescription for acetaminophen suppository
Rationale	Nurse Bobby Lee should identify that Dale's temperature is within the expected reference range. Therefore, there is no need for Bobby Lee to obtain a prescription to administer an acetaminophen suppository.

Optimal Decision	
Scenario	The nurse is selecting the appropriate size of compression stockings for the client.
Question	Nurse Bobby Lee has measured Dale's legs for the compression stockings and documented the findings in the preoperative checklist. Using the graph below, which of the following sizes should Bobby Lee select? Compression Stocking Sizing Chart Size Calf Circumference L39.4 to 45.7 cmXL43.2 to 48.3 cmXXL45.7 to 53.3 cmXXXL53.3 to 66 cm Length Leg Length Regular40.6 to 45.7 cmLong45.7 to 50.8 cm
Selected Option	XL Regular
Rationale	Nurse Bobby Lee should identify that the conversion of inches to centimeters requires multiplying the values in inches by 2.54. Therefore, Dale's calf circumference would be 48 cm and the length would be 45.47 cm. Bobby Lee should select an XL Regular pair of compression stockings.

Optimal Decision	
Scenario	The nurse is reviewing the provider's preoperative orders and is completing the preoperative checklist.
Question	Nurse Bobby Lee is completing the preoperative checklist to prepare Dale for surgery. Which of the following tasks is the priority for Bobby Lee to complete?
Selected Option	Insert peripheral IV access
Rationale	When using the airway, breathing, circulation priority framework, Nurse Bobby Lee should first initiate IV access to provide fluids to Dale, who is NPO to avoid hypovolemia, as well as prescribed IV antibiotics to reduce the risk of infection.

Optimal Decision	
------------------	--

Scenario	The acute care nurse is reviewing the postoperative orders for the client.
Question	Nurse Merryll is completing a review of Dale's postoperative prescriptions. Which of the actions should Merryll plan to take?
Selected Option	Administer the cefazolin at 1815
Rationale	According to Dr. Claw's prescription this medication is to be administered every 8 hr for 24 hr postoperatively. Nurse Merryll should plan to administer the cephazolin to Dale via intermittent IV bolus at 1815, which is 8 hours after the dose received in the operating room.

Scenario	Merryll must determine which assessment findings requires further action.
Question	Nurse Merryll is reviewing the findings from the postoperative assessment completed for Dale. Which of the following findings should Merryll address?
Selected Option	Level of consciousness
Rationale	Nurse Merryll should identify that Dale is oriented to person, place, and situation. Dale's report of feeling tired is expected following surgery and the administration of opioids for pain. Merryll should continue to monitor Dale's level of consciousness, however there is no need to take action at this time.

Scenario	Nurse Merryll is reviewing Dale's vital signs collected during their postoperative assessment.
Question	Nurse Merryll is reviewing Dale's vital signs in the EMR. Which of the following vital signs should Merryll address?
Selected Option	Temperature
Rationale	Nurse Merryll should recognize that Dale's temperature has decreased from the previous finding in recovery, and they are now slightly below the expected reference range and considered mildly hypothermic. Therefore, Merryll should take further action to address Dale's temperature.

Optimal Decision	
Scenario	Nurse Merryll is identifying actions to implement first.
Question	Nurse Merryll is planning care for Dale. Which of the following actions should Merryll take first to address Dale's temperature?
Selected Option	Apply a warm blanket.
Rationale	When using the evidence-based practice priority framework, Nurse Merryll should identify that the first action to take to address Dale's postoperative temperature is to apply a warm blanket. This reduces heat loss and provides warmth to a large body surface area, effectively bringing Dale's temperature up to the expected reference range.

Optimal Decision	
Scenario	Merryll is determining which actions to take based upon the neurovascular assessment.

Question	Nurse Merryll has entered the information from the neurovascular assessment of Dale's right lower extremity. Based on the assessment findings, which of the following actions should Merryll take?
Selected Option	Obtain Dale's right pedal pulse using a doppler.
Rationale	Nurse Merryll should identify that Dale's right pedal pulse was not palpable, which could indicate an alteration in perfusion to their right leg. Therefore, Merryll should take further actions to determine the presence of a pedal pulse by using a doppler device.

Scenario	Merryll is determining which medication to administer to Dale to address their pain.
Question	Nurse Merryll is reviewing Dale's EMR to determine which pain medication should be administered to manage Dale's current pain level. Which of the following medications should Merryll prepare to administer?
Selected Option	Acetaminophen
Rationale	Nurse Merryll should identify that Dale is experiencing severe pain in their right hip. Acetaminophen is a nonopioid analgesic that is used to manage mild pain.

Scenario	Nurse Merryll is preparing to teach Dale about the adverse effects of morphine sulfate.
Question	Nurse Merryll is planning to provide teaching with Dale about the adverse effects of morphine sulfate. Which of the following statements should Nurse Merryll make?
Selected Option	"This medication can cause constipation."
Rationale	Nurse Merryll should identify that morphine sulfate is an opioid analgesic that has adverse effects such as constipation, confusion, bradycardia, sedation, and hypotension.

Scenario	Merryll and Shannon are assisting Dale back to bed.
Question	Nurse Merryll and assistive personnel Shannon are preparing to assist Dale with transferring back to bed. After reviewing Yoshi's progress note, which of the following videos demonstrate the actions Merryll should take?
Selected Option	Nurse and AP lift client from under the armpits
Rationale	When transferring Dale from the chair to the bed, Nurse Merryll and AP Shannon should use a wide base of support and a gait belt to provide stability and reduce the risk of injury to Dale and themselves. Nurse Merryll and Shannon used a narrow base of support and lifted under Dale's axilla area, increasing the risk for injury and falls.

Individual Report – Score Explanation and Interpretation

Reasoning Scenario Information:

Reasoning Scenario Information provides the date, time and duration of use, along with the score earned for each attempt. A Reasoning Scenario Performance score of Strong, Satisfactory, or Needs Improvement is provided for each attempt. This information is also provided for the Optimal Decision Mode if it has been enabled.

Reasoning Scenario Performance Scores:

Strong	Exhibits optimal reasoning that results in positive outcomes in the care of clients and resolution of problems.
Satisfactory	Exhibits reasoning that results in mildly helpful or neutral outcomes in the care of clients and resolution of problems.
Needs Improvement	Exhibits reasoning that results in harmful or detrimental outcomes in the care of clients and resolution of problems.

Reasoning Scenario Performance Related to Outcomes:

A clinical reasoning performance score related to each outcome is provided. Outcomes associated with student responses are listed in the report. The number across from each outcome indicates the percentage of responses associated with the level of performance of that outcome.

NCLEX® Client Need Categories:

Management of Care	Providing integrated, cost-effective care to clients by coordinating, supervising, and/or collaborating with members of the multi-disciplinary health care team.
Safety and Infection Control	Incorporating preventative safety measures in the provision of client care that provides for the health and well-being of clients, significant others, and members of the health care team.
Health Promotion and Maintenance	Providing and directing nursing care that encourages prevention and early detection of illness, as well as the promotion of health.
Psychosocial Integrity	Promoting mental, emotional, and social well-being of clients and significant others through the provision of nursing care.
Basic Care and Comfort	Promoting comfort while helping clients perform activities of daily living.
Pharmacological and Parenteral Therapies	Providing and directing administration of medication, including parenteral therapy.
Reduction of Risk Potential	Providing nursing care that decreases the risk of clients developing health-related complications.

Physiological Adaptation	Providing and directing nursing care for clients experiencing physical illness.
---------------------------------	---

Quality and Safety Education for Nurses (QSEN)

Safety	The minimization of risk factors that could cause injury or harm while promoting quality care and maintaining a secure environment for clients, self, and others.
Patient-Centered Care	The provision of caring and compassionate, culturally sensitive care that is based on a client's physiological, psychological, sociological, spiritual, and cultural needs, preferences, and values
Evidence Based Practice	The use of current knowledge from research and other credible sources, upon which clinical judgment and client care are based.
Informatics	The use of information technology as a communication and information gathering tool that supports clinical decision making and scientifically based nursing practice.
Quality Improvement	Care related and organizational processes that involve the development and implementation of a plan to improve health care services and better meet the needs of clients.
Teamwork and Collaboration	The delivery of client care in partnership with multidisciplinary members of the health care team, to achieve continuity of care and positive client outcomes.

Body Function

Cardiac Output and Tissue Perfusion	The anatomical structures (heart, blood vessels, and blood) and body functions that support adequate cardiac output and perfusion of body tissues.
Cognition and Sensation	The anatomical structures (brain, central and peripheral nervous systems, eyes and ears) and body functions that support perception, interpretation, and response to internal and external stimuli.
Excretion	The anatomical structures (kidney, ureters, and bladder) and body functions that support filtration and excretion of liquid wastes, regulate fluid and electrolyte and acid-base balance.
Immunity	The anatomic structures (spleen, thymus, bone marrow, and lymphatic system) and body functions related to inflammation, immunity, and cell growth.
Ingestion, Digestion, Absorption and Elimination	The anatomical structures (mouth, esophagus, stomach, gall bladder, liver, small and large bowel, and rectum) and body functions that support ingestion, digestion, and absorption of food and elimination of solid wastes from the body.
Integument	The anatomical structures (skin, hair, and nails) and body functions related to protecting the inner organs from the external environment and injury.
Mobility	The anatomical structures (bones, joints, and muscles) and body functions that support the body and provide its movement.

Oxygenation	The anatomical structures (nose, pharynx, larynx, trachea, and lungs) and body functions that support adequate oxygenation of tissues and removal of carbon dioxide.
Regulation and Metabolism	The anatomical structures (pituitary, thyroid, parathyroid, pancreas, and adrenal glands) and body functions that regulate the body's internal environment.
Reproduction	The anatomical structures (breasts, ovaries, fallopian tubes, uterus, vagina, vulva, testicles, prostate, scrotum, and penis) and body functions that support reproductive functions.

Decision Log

Information related to each question answered in a scenario attempt is listed in the report. A brief description of the scenario, question, selected option and rationale for that option are provided for each question answered. The words "Optimal Decision" appear next to the question when the most optimal option was selected.

The rationale for each selected option may be used to guide remediation. A variety of learning resources may be used in the review process, including related ATI Review Modules.
