

Bob the Water Droplet

Brant Baltes

Bob the water droplet was a very happy water droplet. He is part of the water cycle. The water cycle is where process of water evaporation, condensation, and precipitation. This is Bob's Life journey.

My life started out as a water droplet under ground 10 meters below Fruitvale between grains of sand. Bob had sat there for his whole life waiting. Waiting to do something with his life. Bob felt something pulling him. He felt the pull of an underground well water pump. Bob started to feel happy because he had wanted to see the outside world so much. Today was the day it was finally happening.

Bob was pumped to the surface and into this blue bowl of some kind. The bowl was a water dish, a water dish for a dog! The dog's name was JoJo. JoJo was thirsty and her owner got her some water. Bob was then drank up by JoJo. Bob was put into the dog's system. Bob was put into JoJo's Glands in her tongue. JoJo was running around the yard and choked and spit up a lot of her water she drank earlier.

Bob was taken out of her system he was absorbed into the ground after a few days and then felt another pull and was pumped back up to the surface. Bob was pumped to the surface and put into a 5 gallon bucket. A man was watering his garden along the street and stumbled. Water spilled out of the bucket and Bob went flying out into a big mud puddle in the middle of the street. The next few days weather got very hot in Fruitvale and Bob's puddle evaporated and went into the clouds above Fruitvale.

A very strong wind pushed Bob out above the mountains of Fruitvale. Bob is absorbed into the cloud and is on the long journey west. Fortunately for him there are mountains west of Fruitvale. Bob is getting closer and closer to the mountains and he is getting very cold now. Bob was turned into an ice crystal and then starts to fall he is falling very fast and drifting in the

wind. Bob lands on a mountain peak. Bob is going to stay there until the snow melts and turns to water and then is evaporated. This is the life of a water droplet.
