

Name: \_\_\_\_\_

Unit: 8\_\_\_\_\_

Lesson Name: 8.2\_\_\_\_\_

Presentation on: Signs of Health\_\_\_\_\_

Notes from Presentation:

What is Health?

- the state where all body parts are functioning normally

Recognizing Good Health

- contentment
- alertness
- good appetite
- sleek coat and pliable skin
- bright eyes and pink eye membrane
- normal feces and urine
- normal temperature pulse rate, and respiration rate

Recognizing Poor Health

- loss of appetite
- listless or depressed
- droopy ears
- humped back and head down separate from other animals
- coughing, wheezing, or labored breathing

Diagnosis

- the process of identifying a disease by examination and study of symptoms
- may include:
  - observing signs of good versus poor health
  - physical examination
  - vet diagnosis

Symptoms

- observable differences an animal exhibits from its normal function
- signs of poor health
  - fever
  - weight loss
  - listless

Treatment

- not effective or efficient for all diseases
- some can be administered by producer
- vet care

Methods of Treatment

- topical- applied to the skin
- oral- through the mouth
  - in or on feed
  - drenching

- balling gun
- injection- shot using a needle and syringe
- intramuscular
- subcutaneous
- intravenous

List 5 key points that are important to remember from this presentation.

1. diagnosis

2. intramuscular
3. subcutaneous
4. intravenous
5. physical observations

List 3 ideas or concepts that this new information has in common with previous things learned.

1. treatment
2. health
3. symptoms

List questions or ideas that remain unclear about the information presented that should be asked for clarity at the appropriate time.
