Ag Issues

The issue we will be looking at is ocean pollution specifically in the Atlantic Ocean. This is a common issue that has been going on for years and years, but there haven't been any solutions. But there needs to be a solution because the pollution in our oceans are hurting our marine life, human life, and the Earth.

Firstly, ocean pollution starts on the land. Sewage, toxic chemicals from industries, nuclear waste, thermal production, plastics, acid rain, and oil spillage all play a key part of being leading factors of ocean pollution. But, how do all the things happen, that's mainly because of us humans, we pollute the ocean sadly. So far, there is 5.25 trillion macro and micro pieces of plastic just in our oceans. And every day around 8 million pieces of plastic end up in our ocean. And soon enough if we don't fix this, climate change will become an even bigger problem.

And ocean pollution relates a lot to my daily life especially during the summer. Occasionally when I walk onto the beach, I see litter, that there is a problem, because ocean pollution starts on land and eventually ends up in our ocean. Or most of the times I will go surfing at the ocean city beach, Atlantic city beach, or the stone harbor beach, and when I'm out there surfing, I will see trash in the ocean and it really angers me. So, in reality it affects people everywhere.

All and all, we need to find a solution because its already really bad but it's just going to get worse when time moves on with no solution. And who's responsible for the ocean being so polluted, you may ask. It's us, the humans, people trash the Earth not knowing how bad it's

hurting us and the animals. So, we need to take fully responsibility for our actions and come up with a solution fast to help our oceans before it's too late.
