

The Heart

Heart - pumps oxygenated blood throughout the body and then deoxygenated blood to the lungs

Circulatory System

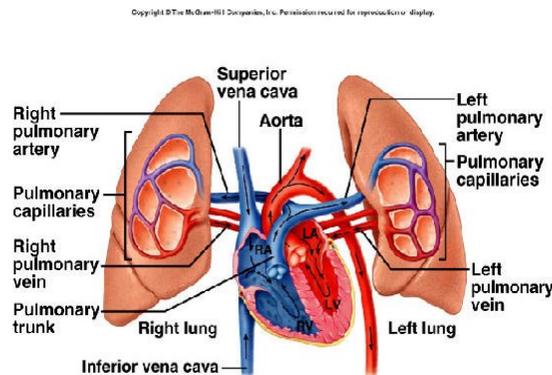

Circulatory System - an organ system that permits blood and circulation to transport nutrients, oxygen, and carbon dioxide

By: Dustin Renninger

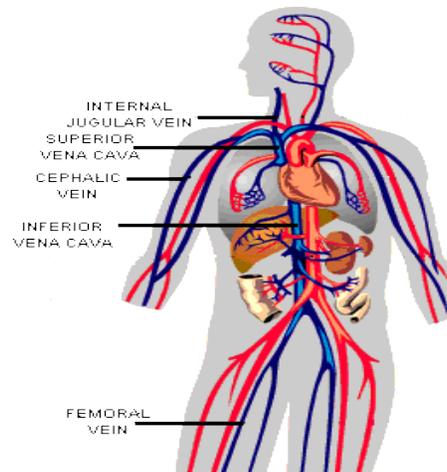

Pulmonary Circulation

Part of the system in which oxygen depleted blood is pump from the heart by the pulmonary artery to the lungs and then returns oxygenated to the heart

The Veins

Are blood vessels that carry blood towards the heart, most veins carry deoxygenated blood from the tissues back to the heart

The Arteries

Arteries are blood vessels that are used in the system to carry blood away from the heart, most arteries carry oxygenated blood
