

SEEK & FIND: WOUND

Student Name: Kristen Kangas Date: August 1st, 2023

Instructor Signature Jennifer Brick The signature is meant for faculty. Student's earned points **12.25/20**

15.5/20-1 resubmission = 14.5/20

X/20-2 resubmission = Y/20

Kristen, there are 4.5 points available in this assignment & you need to achieve at least 2.5 additional points in order to have a 16/20 for an 80%. I highlighted the info needed in **column A** below the last time & this is still a requirement. In the **blue Earned Points** column I identified where you could answer a question to achieve additional points & wrote in this color info about what is missing or incorrect. If this does not make sense, let me know & we can chat.

Kristen, you missed sections of the questions. Plus, gauze is the term used for open weave 4x4s, Kerlix, etc. & sometimes may be in roll form. Gauze is not considered a secondary dressing because of the open weave & the fact that bacteria, etc. can pass through the dressing. You may redo to achieve an 80%. Columns w fewer than assigned points are questions you should consider redoing. Put new answers in this form in a different color, thank you. This assignment is intended to help you become familiar with some of the products used when providing wound care. : It is not uncommon for WOC nurses to be asked for treatment recommendations with little wound information and for unseen wounds. These recommendations are based upon knowledge of wound dressing categories and matching them to wound characteristics. This assignment helps to mimic this situation.

Carefully read the information to help you identify the products that meet the descriptions being provided. The products should be those considered as a topical therapy/wound dressing. Advanced wound therapy options, such as NPWT and collagen, should only be identified when indicated.

Column A: For each wound type or scenario, identify two different categories/classifications (foam, hydrocolloid, transparent film, etc) of topical therapy. **A complete answer identifies the dressing classification, a specific product name and manufacturer, and the secondary dressing if indicated.** The inclusion of the primary and secondary dressing is considered a complete answer. For example: Hydrofiber covered by a hydrocolloid: Aquacel (Convatec) covered by a Duoderm (Convatec). Use the product name & **NOT** the product number when completing this assignment.

Column B: Either identifies additional information related to the wound and mini case scenario in Column A OR asks other wound care related questions Answer the questions.

Column A Topical therapy	Possible Points	Earned Points	Earned Points	Earned points	Column B	Possible Points	Earned Points	Earned Points	Earned points
Wounds with scant to small amounts of drainage.	0.5	0	.25	Points	Identify special precautions/considerations for each of the chosen products in Column	0.5	.5	.5	.5

SEEK & FIND: WOUND

<p>1. Hydrocolloids covered by a secondary dressing gauze <i>You need to address this secondary dressing comment</i></p> <p>Bepanthen Wound Healing Ointment</p> <p>2. Hydrogel covered by a secondary layer nonadherent contact layer.</p> <p><i>Kristen, you need to read more about hydrocolloids as # 1 is incorrect & a non-adherent contact layer is not a secondary dressing</i></p> <p><i>Biatain®</i></p>					<p>A?</p> <p>Product 1. It is important to note that the correct size of a hydrocolloid should allow about 1 inch of intact periwound skin.</p> <p>Product 2. It is significant to note that the hydrogel sheet dressings with adhesive may allow visualization of the wound bed which reduces the need for premature removal.</p> <p>OK</p>				
<p>Sacral wound covered with 100% intact eschar.</p> <p>1. Antimicrobial blue foam dressing (for dry eschar)</p> <p>2. Contact layer with gauze (dry)-<i>as noted at top of this, gauze is not a secondary dressing</i></p>	1	.75	.75	Points	<p>The sacral wound (Column A) now presents as boggy and odorous, draining thick exudate and has a 2 cm area of erythema surrounding the wound.</p> <p>1. Would this assessment change your topical therapy choice?</p> <p>Yes</p> <p>2. If yes, what would be your new topical treatment?</p>	2	1.25	1.75	Points

SEEK & FIND: WOUND

<p>1. hydrogel 2. alginate OK, and these are the primary dressings. What is secondary dressing.</p> <p>A secondary dressing could include 3MTM Tegaderm Non-Adherent Contact layer Contact layers are not secondary dressings</p> <p>Secondary dressings:</p> <p>1. Tegaderm transparent, polyurethane adhesive film 2. RepliCare™</p>					<p>direction for removal to protect the flap from disruption. Great idea</p> <p>2. Use padded corners/ edges in the patient environment, use shin guards and gloves for wheelchair- bound patients.</p>				
<p>Deep tissue pressure injury (DTPI)</p> <p>1. Hydrogel this is a primary dressing so what is secondary?</p> <p>Transparent film- secondary dressing</p>	1	.75	1	1	<p>Both of these pictured dressings are from the same classification. Identify the classification/category and the implication for use.</p>  <p>Classification: Foam dressings</p>	1	1	1	1

**** This assignment may also be completed via an internet search.**

SEEK & FIND: WOUND

<p>Just so you know, you will set up autolytic debridement w this combo vs trying to have the DTPI resolve</p> <p>2. Foam dressing</p>					<p>Use: Foam dressings are utilized as preventative dressings for patients with fragile skin at risk for friction injury. In addition, international guidelines also suggest using foam dressings in pressure injuries such as sacral and heels area.</p>				
<p>Red, granulating stage 3 sacral pressure injury with little exudate.</p> <p>1. Hydrocolloid Granuflex dressing</p> <p>2. McKesson Hydrogel Sheet dressing this is a primary dressing</p> <p>You have not selected the correct dressings for a stage 3 wound on the sacrum</p> <p>Aquacel Foam dressing with secondary dressing transparent film – both this & Duoderm are all in one primary/secondary dressings. Both will cover the wound. So given this is a stage 3 sacral wound what is missing?</p> <p>Duoderm signal Dressing with secondary dressing transparent film</p>	1	0	0	Points	<p>Identify an appropriate support surface (category/brand name) to use when pressure injuries are present.</p> <p>Support service for wheelchair bound patients' viscoelastic foam (Alimed- brand name) OK</p>	1	1	1	1

**** This assignment may also be completed via an internet search.**

SEEK & FIND: WOUND

<p>Primary dressing impregnated gauze (polyhexamethylene biguanide (PHMB) and secondary dressing Allevyn or Mepilex</p>									
<p>Partial thickness wound with moderate amounts of drainage</p> <p>1. Plurogel Burn and Wound dressing</p> <p>2. Collagen with impregnated gauze Impregnated gauze? What are your secondary dressings?</p> <p>Secondary dressings: 3M tm Tegaderm Superabsorber Dressing</p> <p>Comfeel Plus semipermeable hydrocolloid – this may not handle the drainage</p>	1	.5	1	1	<p>What are the generic names listed for the products in the photos</p> <p>1. Photo A: Aquacel Generic: Convatec</p> <p>Ag Extra TM Hydrofiber Dressing</p> <p>2. Photo B: Algisite Generic: Calcium Alginate Dressing</p> <div style="display: flex; justify-content: space-around;">   </div> <p>A B</p>	1	.75	1	1
<p>Stage 4 ischial pressure injury, 80% granulation tissue, 20% slough with tunneling and undermining.</p>	1	.25	.5	Points	<p>Identify two additional treatments (other than topical) to address with this patient.</p>	1	.5	.5	Points

**** This assignment may also be completed via an internet search.**
