

**Virtual Journal Entry with Plan of Care & Chart Note**

 Student Name: Alice Pownall-Gray Day/Date: 10/15/2025

 Setting: Hospital  Ambulatory Care • Home Health Care • Other: \_\_\_\_\_

**WOC nurses function as consultants and develop plans of care for other care givers as a guide to providing care in the WOC nurse's absence. For this assignment, a chart review and assessment information are provided for you. Use this information to write a chart note and to develop a plan of care.**

<b>Chart Review/History</b>	<p><u>Age/sex</u>: 32-year-old female  <u>PMH</u>: unknown  <u>CC</u>: Presented to ED after being revived in the field by paramedics. Patient was found by roommate lying on couch and unresponsive. Responsive and confused in the ambulance. Unable to obtain information related to altered mental status likely due to hepatic encephalopathy.  <u>Meds</u>: Unknown  <u>Social hx</u>: Roommate reported frequent drug use with recent known use of meth</p> <p>Labs: K 2.4, bicarb 19, lactate 2.9, myoglobin 113, UDS opiates positive ammonia 226, and bilirubin 2.9.                  CT and MRI head negative for stroke.</p> <p><u>ED Braden Score</u>:</p> <table border="1" style="margin-left: 20px;"> <tr><td>Sensory Perception</td><td>1</td></tr> <tr><td>Moisture</td><td>3</td></tr> <tr><td>Activity</td><td>1</td></tr> <tr><td>Mobility</td><td>1</td></tr> <tr><td>Nutrition</td><td>1</td></tr> <tr><td>Friction/Shear</td><td>1</td></tr> <tr><td>Total</td><td>8</td></tr> </table> <p>Transferred to ICU, intubated for impending airway compromise.                  Medications: Sodium Bicarbonate 650mg PO two times a day after meals, Rifaximin 550mg PO two times a day, Lactulose 20g/30mL PO every 6 hours</p>	Sensory Perception	1	Moisture	3	Activity	1	Mobility	1	Nutrition	1	Friction/Shear	1	Total	8
Sensory Perception	1														
Moisture	3														
Activity	1														
Mobility	1														
Nutrition	1														
Friction/Shear	1														
Total	8														

<p><b>Assessment/encounter:</b>                  WOC nurse referral 15 days post admission to hospital for reinsertion of FMS &amp; patient buttocks/thighs skin breakdown.                  Transferred to medical unit from ICU 2 days prior.                  Internal fecal management system in use for past 15 days, but has fallen out.  <u>LOC</u>: awake, alert, oriented to name but groggy; follows commands</p>
---

VS: Temperature: 99, Pulse: 92, Respirations: 26  
Initial interview: unable to obtain as patient is groggy

Braden Score: from AM by nursing staff

Sensory Perception	4
Moisture	3
Activity	1
Mobility	3
Nutrition	2
Friction/Shear	2
Total	15

**Skin breakdown assessment:**

Location: buttocks & inner thighs. Buttocks and pads soiled with liquid stool brown/yellow, reported to be constantly oozing stool

Skin breakdown type: MASD

Extent of tissue loss: superficial

Size & shape: Scattered raised papules on perianal area, with satellite lesions.

Wound bed tissue: pink

Exudate amount, odor, consistency: None

Undermining/tunneling: None

Edges: Attached

Periwound skin: non-blanchable erythema to buttocks & thighs

Pain: Not able to rate but grimaced on cleansing and pain apparent by patient comments

Rectal vault assessment: Moderate rectal tone noted and no stool obstruction.

Occasional urinary incontinence

Education: Collaborate with physician regarding drug use, liver involvement, lifestyle

Suggested consults: identify in note

**Photo:**

Using critical evaluation of the provided encounter data, identify what would you have done differently regarding assessment data collected, treatment recommendations, and education?

**1. Identify what would you have done differently regarding assessment data collected, treatment recommendations, and education?**

**Do you believe the Braden scoring is accurate?** The ED Braden score indicated the patient was at severe risk for pressure injury. I do believe this is correct. I feel the Braden score is incorrect in the AM shift report, and the scores in sensory perception, moisture, mobility, friction and shear should be scored lower. I also would have wanted to see more labs, such as albumin levels to see how her nutrition may affect her healing. **Such as?** I also would like to know if the patient was tested for C-diff, however I suspect the diarrhea is from the lactulose. It does not say if the patient has a catheter, but I would probably think it would be a good idea since she is showing signs of sepsis and having a catheter would be helpful to monitor her I &O plus keep her peri area drier. **Or someone w potential sepsis then another indwelling tube may not be best. What else could you do instead of a Foley? One could also choose to use as PureWick™ external system, or a silicone based external catheter such as UriCap.**

Using the information from the encounter and your critical evaluation develop a plan of care to be executed by other members of the healthcare team in your absence. Statements should be directive and holistic. Write as nursing orders. (For example: *What dressing change regimen would you recommend?*)

**2. WOC Plan of Care (include specific products used)**

1. Fecal Management system inserted and to be removed day 29, with prn flushes 50 ml water BID if needed for clogged tubing. **Another option would be use of an external fecal collection pouch, which is replaced every 1 to 2 days. Based on the photo, what else could you do to contain stool?**
2. Daily assessment of pt tolerance of fecal management tube and assessment of stool consistency.
3. Antifungal skin barrier ointment 2-3 times daily with peri care to all area on buttocks and groin with MASD with redness and satellite lesions.
4. **Apply external silicone catheter**
- 4 Assess urinary catheter function every shift and record output and assess peri skin.
5. Braden assessment within eight hours of admission and every shift while in acute care. **You have to insert first**  
**You did not address some of the scores on the Braden in your plan**

Write a chart note giving careful consideration to the chart review information, how the patient was assessed, the problems, and the rationale behind the plan of care. The WOC nurse consultant/specialist note should begin with why you are seeing the pt; Initial visit for..., follow-up visit for..., evaluation and management of..., etc. Then, describe the visit. Be sure to include any physical assessment, interactions, and specific products used/recommended for use. Write in a manner others will be able to understand and be able to interpret your plan of care.

**3. Chart note:**

Initial visit:  
Pt seen today for consult due to MASD and Fecal tube management system  
Due to the severity and pain the patient is experiencing, the high risk of sepsis, and the raw area of excoriation and satellite lesions suggesting a possible yeast infection I would agree with use of a fecal management system. I would not recommend and oral antifungal medication (due to liver status) but rather a

barrier antifungal ointment. I would use this as she is also incontinent of urine at times, and this will help to protect her from the urine.

**Specific plan:**

1. Fecal Management system inserted and to be removed day 29, with prn flushes 50 ml water BID if needed for clogged tubing.
2. Daily assessment of pt tolerance of fecal management tube and assessment of stool consistency.
3. Antifungal skin barrier ointment 2-3 times daily with peri care to all area's buttocks and groin with MASD with redness and satellite lesions.
4. Assess urinary catheter function.
5. C-diff labs pending.

**Follow Up visit:**

1. Re-assess effectiveness and need for fecal management system, dc when appropriate
2. Assess buttocks and peri area to see if MASD has improved and fungal rash has resolved.
3. Assess if foley catheter is patent and intact.
- 4 Continue to collaborate with staff RN's with management of the system and troubleshooting ie: flushing FMS if needed, pressure reduction use of antifungal ointments, alert WOC when system is no longer appropriate.
5. Educate patient related to continence care when appropriate

**You should have a learning goal for each clinical day. What was your goal or reason for choosing this particular mini case study? Were you able to meet this goal? Why or why not?**

**4. What was your goal for choosing this case?**

I chose this case study to meet my goal of having continence experience and being able to WOC plan and chart appropriately.
