Disciplinary Action Summary Assignment

Instructional Module 2

Student Name: Ashley Poole

Date: 9/29/20

DAS Assignment # 1 (1-4)

Name of the defendant: Jennifer Jaymes Anderson

License number of the defendant: 781033

Date action was taken against the license: August 3, 2017

Type of action taken against the license: Jennifer Anderson received the sanction of remedial education in order to get her license renewed.

Use the space below to describe the events which led to action taken against the license. If multiple charges were in play, be sure and cite them, e.g. drug diversion, HIPAA violation, abandonment, forfeiture on student loans, etc.

The defendant did not clarify with the physician where the surgical site was located before administered medical. She also failed to document the site where she administered the medication in the patients medical records.

Use the space below to provide a description of measures you think could have prevented any action being taken against the license and/or would have prevented harm to the patient, if harm occurred.

The two actions that didn't occur could have caused the patient serve harm but in this intense the patient remained ok. The defendant could have doubled checked with the physician on where the surgical site was and clarify where to inject the lovenox. She also should have also made the time to document because this mistake would have been caught earlier and before the surgery happened to kept the patient out of harm.

Use the space below to describe what action you think a prudent nurse would take as the first to person to discover the event described, in other words, you are the one who discovers the patient has been harmed by the nurse or you have discovered the impairment or criminal activity cited in the disciplinary action.

A prudent nurse would have notified the charge nurse immediately and the physician about the situation. It's our job to protect and keep the patient safe, therefore seeing this incident take place I would report it so the patient can be taken care of right away.
