Code Blue Role Review

Watch the assigned videos and make notes on the following roles during a code scenario.

Team Leader/Charge Nurse:

Made assignments

Told the others what to give like medications, shocks, gave roles to certain ones.

Scribe (documentation):

Kept time

Documented when things happen

Kept a eye on chest compressions

Compressor:

Switched out every 2 minutes

Kept compressing up until shock was ready

Steady and fast

Medications:

Only team leader orders the medication and the scribe document the medication time. Flushed after every medication.

Stated the medication and dose back to the team leader

Airway management:

Was delivering breaths but not over ventilating the patient

Tubed the patient

GoFor/Rover:

This role is to go retrieve things needed in a code.

What did you notice that was efficient/well done in the videos?

They knew their roles before entering the room

They all flowed fluently together

They were all calm

What did you notice that could be improved in the videos?

Videos were a little outdated.

In the second video the crash cart drawers were already open so how were you for sure that all the things you needed were in there

In the second video she went to the hall to yell code blue instead of just pushing the button first
