

## Overview

Each student has been grouped by clinical week. Each clinical week's group will be divided into 2 groups (Group A & Group B) to accommodate COVID19 restrictions of no more than 5 students in Covenant's Simulation Center. All students prior to simulation will complete the assigned discussion board assignments as outlined in the learning guide.

## Discussion Board Questions

### Pathophysiology & Nursing Judgement

1. Explain the risk factors, etiology, and pathophysiology of the disease process.
2. What are the top 3 concerns for the nurse when providing care?

Medications: Post the following for each medication given within the last 24hours:

1. pharm classification
2. reason for medication
3. pharmacokinetic properties (onset, 1/2 life, peak, duration)
4. evaluate dose for safety
5. top 3 nursing implications
6. top 3 patient teaching
7. administration needs/concerns

### Diagnostics & Discharge Planning

1. Evaluate the labs in the chart. What does this information mean for your patient?
2. What serum labs are missing? Which lab values would you like to know more about? Why?
3. Evaluate the VS in the chart. What does this information mean for your patient? Be keen on examining the trends (if applicable). Are the findings expected? What would you expect the VS to be when you walk into the room to assume care?
4. Investigate other diagnostics necessary to being able to plan care (i.e. Xray, MRI scan, CT scan, etc.). If results are available, what does this mean for your patient? Are there diagnostic tests you would have expected to be ordered but are not?
5. What specifically must be taught prior to discharge? How can the nurse determine learning was successful?

### Nursing Care Plan

Create 3 full nursing diagnosis applicable to the patient and rank them in priority. Using the highest priority nursing diagnosis, expand the care plan to outline 2 patient outcomes and 3 nursing interventions. Please remember to view the patient in a holistic manner. Nursing diagnoses tend to address physical needs but addressing mental, spiritual, and educational needs are helpful. We will prioritize nursing diagnoses in the debrief period.
