

Covenant School of Nursing Reflective

Learning to be a reflective practitioner includes not only acquiring knowledge and skills, but also the ability to establish a link between theory and practice, providing a rationale for actions. Reflective practice is the link between theory and practice and a powerful means of using theory to inform practice thus promoting evidence based practice.” (Tsingos et al., 2014)

Using the Reflective Practice template, document each step. The suggestions in the boxes may help you as you reflect on the incident. This Reflective Practice document will be reviewed by faculty and then you will post the final reflection in your LiveBinder folder.

Step 1 Description A description of the incident, with relevant details. <u>Remember to maintain patient confidentiality.</u> Don't make judgments yet or try to draw conclusions; simply describe the events and the key players. Set the scene! It might be useful to ask yourself the following questions • What happened? • When did it happen? • Where were you? • Who was involved? • What were you doing? • What role did you play?	Step 4 Analysis • What can you apply to this situation from your previous knowledge, studies or research? • What recent evidence is in the literature surrounding this situation, if any? • Which theories or bodies of knowledge are relevant to the situation – and in what ways? • What broader issues arise from this event? • What sense can you make of the situation? • What was really going on? • Were other people's experiences similar or
Step 2 Feelings Don't move on to analyzing these yet, simply describe them. • How were you feeling at the beginning? • What were you thinking at the time? • How did the event make you feel? • What did the words or actions of others make you think? • How did this make you feel? • How did you feel about the final outcome?	Step 5 Conclusion • How could you have made the situation better? • How could others have made the situation better? • What could you have done differently? • What have you learned from this event?
Step 3 Evaluation • What was good about the event? • What was bad? • What was easy? • What was difficult? • What went well? • What did you do well? • What did others do well? • Did you expect a different outcome? If so, why? • What went wrong, or not as expected? Why? • How did you contribute?	Step 6 Action Plan • What do you think overall about this situation? • What conclusions can you draw? How do you justify these? • With hindsight, would you do something differently next time and why? • How can you use the lessons learned from this event in future? • Can you apply these learnings to other events? • What has this taught you about professional practice? about yourself? • How will you use this experience to further improve your practice in the future?

Covenant School of Nursing Reflective

I found the virtual portion of the second week of clinical to be a good refresher on the previous material we learned the first three weeks of IM7. I was nice to reapply that knowledge to scenarios and discuss the case study. The following day was in person morning clinical. It was nice to see the different aspects of teamwork and patient care that was taking place. While my primary nurse was talking to the patient for the plans during the day, the other nurse orienting performed an initial assessment on the patient. It was efficient the way they split the work and have the best outcome while caring for the patient. Later, I noticed that a patient's IV pump was constantly alarming due to the machine alerting there was an occlusion on the patient's side. I went into the room with my fellow classmate and we tried troubleshooting and looked for the air in the line. Although the pump malfunctioned to the point where I needed to get my nurse to help fix the pump. Although this was not my nurse's patient, they came in to fix the machinery while the other nurse was busy with another patient. Teamwork on the floor was great and even better than what I have seen in the past. It is important to collaborate not only with physicians, but with other staff members to achieve the best patient care.
