- ❖ Why is side lying position better for feeding preterm infants?
You can regulate rate and amount which helps with bolus control and is safer. Your back hand can also feel what's going on with their breathing. They also aren't flexed up which causes pressure on the abdomen and reflex.
- ❖ What are some indications for feeding tube placement discussed in the video?
Premature, feeding immaturity, poor oro-motor skills, baby receiving ventilation
- ❖ How long before the cord stump falls off? 1-3 weeks
- ❖ What are some tips for changing a male newborn diaper?
Place wipe over penis to avoid getting sprayed during diaper change. Also, to prevent leaks or blowouts make sure ruffles around legs and back aren't tucked in
