

1. Why is side lying position better for feeding preterm infants?

When a preterm infant is side lying, it is easier to pace them, and it also elongates the baby, which can help reduce the chance of gastric reflux.

2. What are some indications for feeding tube placement discussed in the video?

Prematurity, feeding immaturity, poor oral motor skills, or if the infant is intubated

3. How long before the cord stump falls off?

1-3 weeks

4. What are some tips for changing a male newborn diaper?

Place a wipe over the penis to avoid being sprayed with urine
