

CSON SBAR

Situation:

Evette Ogam, 37 year, came in for a heroin overdose is having opioid withdrawal

Background:

has a hx of a back surgery in 2012, has come in before for a heroin overdose, depression and drug use

Assessment:

COWS score of 30, has agitation, pain, anxiety, vomiting and diarrhea,

Has a CBC, ETOH, Urine toxicology, CMP, mag, and phos labs that are pending

Vitals of 150/85, 122-HR, RR-22, 98.6, 100% on RA

States her pain is on a level 25

Recommendation:

something stronger for some pain meds other than ibuprofen since it doesn't seem to help, and something for the vomiting and diarrhea and, something to help with the anxiety
