

Professional Skills Performance Videos Pre-Brief

Part of the virtual simulation experience is a physical performance video whereby each student reenacts a scenario presented in the Tuesday TEAMS meeting. Students are required to submit four (4) videos, one video for each of the weeks with a scheduled Tuesday TEAMS virtual simulation.

The Universal Competencies need to be incorporated with each and every encounter with a patient, virtual, simulated, or live. The Competencies will be evaluated in the assessment, medication administration, communication, and procedure performed. The grading rubric is provided in the spirit of transparency. In addition to the rubric, use the Professional Nursing Skills Intervention Instructions as a guide to be certain all critical elements are completed. There are five (5) system focused assessments. Please select a different system focused assessment for each video. Your selection of system assessment, medication for administration, and procedure will be guided by the scenarios presented in the Tuesday TEAMS virtual simulations. When ready to submit a video, name the video with the system focused assessment selected.

Please keep recordings to 20 minutes or less. It is imperative you are prepared and have a working knowledge of the scenario and professional nursing skills in order to be organized and able to complete your performance within the time limit.

The expectation is you perform as you would in a live clinical situation. Nurse out loud so that instructors can understand your rationale for interventions. The SBAR communication from the Tuesday virtual simulation is your report as the on-coming nurse as you take over care of a patient assignment.

Submit the video to the appropriate dropbox before it closes. Try not to wait until the last minute to submit in case there are technical difficulties. To minimize complications when uploading a video to the LMS we have discovered a lower resolution works best (<720 x 480).

These performance videos have an “all or nothing” grade attached to them. If criteria are met, the grade will be recorded as “100”. If criteria are not met, the grade will be recorded as “0”. The 4 video grades will average together in the gradebook.
