

	Safety and Security	Standard Precautions	Communication
Video by CK - CVAD Dressing Gone Awry	didn't perform all the 4 p's	turned her back to the sterile field	told the patient that she was tired, that could make them nervous or not confident that you know what your doing
	didn't change gloves when taking off the dressing and putting it back on	reached over her sterile field (contaminated)	
		didn't keep her gloves sterile once she put them on and she put them on wrong	
		didn't clean the site	
		glove paper contaminated sterile field	

# Start Unprofessional Practice

Critical Thinking	Documentation	Human Caring/Relationships	Professional Role Performance
didn't have the patient turn their head to the left for the dressing change	didn't put the date and time on the cvad	didn't comfort the patient	ignored the patients itching at the site
used her sterile gloves to take off the dressing and palpating, should be using clean gloves to palpate and take off the dressing			
pulled the dressing off the patients site in the wrong direction			
forgot to take the patients mask off after the dressing change was over
