

Online Assignment 1 – Randy Adams

Pre-simulation Quiz = 87.5 %

Simulation Scenario = 88%

The screenshot displays a simulation interface for a patient named Randy Adams. The interface includes a patient profile, a list of actions, improvement opportunities, and a final score.

Patient Profile:

- Randy Adams**
- Adm On: 10/5/2021
- Date of birth: 6/27/1993
- Age: 28
- Gender: Male
- Diagnosis: PTSD complicated by traumatic brain injury

Simulation time: 22:44 Mins

Basic View / Detailed View

Your main opportunities for improvement

- You completed the Primary Care PTSD screening assessment tool. Some of your assessment answers were incorrect. Regarding the indicator '5. Felt guilty or unable to stop blaming yourself or others for the event(s) or any problems the event(s) may have caused?' You noted : 'No'. You should have indicated 'Yes'.
- You completed the ACE Part B. Symptom Check List (Lovell & Collins, 1998 JHTR) assessment tool. Some of your assessment answers were incorrect.

Action Log:

- 00:00 You checked scene safety. It was correct to check scene safety in order to maintain your own safety.
- 00:29 You washed your hands.
- 00:36 You identified the patient.
- 00:51 You asked the patient: Is it OK for your wife to be here, while we talk? It was correct to let the patient give his consent for letting his wife be a part of the interview.
- 01:03 The patient said: I'm not sure what I would do without Joy. You answered: It sounds like your relationship with your wife is very important to you. You used the therapeutic technique of encouraging expression.
- 01:06 You asked the patient: Can you tell me a little bit more about what's going on with you today? It was appropriate to ask the patient what was going on with him to get an understanding of this.
- 01:22 The patient said: The doctors at the VA want me to talk about all the things from the past that make me uncomfortable. Talking about the past won't help. You answered: Are you uncomfortable when you talk about the past? You used the therapeutic technique of making observations.
- 01:26 You asked the patient: Over the past year, when did you feel your best? The patient said: I felt my best when I was with my team in Afghanistan. It was appropriate to ask the patient about when he felt his best.
- 01:53 You said: I would like to ask you some questions related to your concussion that will help me to better assess you. May I ask you these questions?

Score Summary:

- 4 correct (green checkmarks)
- 0 incorrect (red X)
- 0 incorrect (red X)

Post-simulation Quiz = 100%

The screenshot shows a web browser window with the URL <https://phoenix-sim.thepoint.lww.com/titles/9781975175924/content/categories/vsim-asset-list>. The page title is "Mental Health Case: Randy Adams". A sidebar on the left lists navigation options: "Suggested Readings", "Pre-Simulation Quiz", "vSim", "Post-Simulation Quiz" (highlighted in green), "Documentation Assignments", and "Guided Reflection Questions". The main content area displays "Quiz Results" for the "2021vSIM_PostQ_radams" quiz, completed on 2021-10-05 at 09:39:01. The quiz was completed in 00:01:35, with 10 questions answered, all of which were answered correctly (100.0%). A green pie chart shows the 100% score. Below the results, a "Quiz Answers" section shows a question: "Which of the following would most likely show that Randy's concussion symptoms are improving?". The user's response is "Randy reports he is sleeping better.", which is marked as correct. A "Rationale" section explains that improvement in sleep patterns is an indication of improvement for acute concussion, while appetite, high-density lipoprotein levels, and muscle strength are not as directly affected by concussion as sleep quality is.

Quiz Answers

① Which of the following would most likely show that Randy's concussion symptoms are improving? ✓ Time Spent - 00:00:10

Your Response: Randy reports he is sleeping better.

Rationale:
Improvement in sleep patterns is considered an indication of improvement for acute concussion. Appetite, high-density lipoprotein levels, and muscle strength are not as directly affected by concussion as sleep quality is.

Hopefully these screenshots are okay, I completed the vsim before I received the email.
